AMIN MASOUDI

Software Engineer & DevOps Enthusiast

ABOUT ME

CS student and software engineer with full-stack experience: **React/Next.js** on the frontend, **Django/FastAPI/Flask** on the backend, deployed through GitLab CI/CD. At Fara-Ro, reduced API response times by 60% through caching, alongside feature development, bug fixes, and dashboard/data visualization work with MUI, Recharts, and D3.js. Comfortable working across the stack, from database design to deployment.

SKILLS

Languages: Python, JavaScript/TypeScript, Go, SQL
Backend: Django, DRF, FastAPI, Flask
Frontend: React, Next.js, TypeScript
DevOps: Docker, Kubernetes, Ansible, GitLab CI/CD
Tools: Git, Prometheus, Grafana, Nginx, Linux (LPIC)
Databases: PostgreSQL / relational databases

EXPERIENCE

Fara-Ro, Tehran/Hybrid – Software Engineer | [Link](#)

AUG 2025 – MAY 2026 | 10 months

- Improved API response times by up to **60%** by identifying and resolving a caching bottleneck.
- Built interactive dashboards and **data visualizations** (MUI, Recharts, D3.js) to surface complex datasets for customers.
- Built and maintained frontend applications in **Next.js**, integrating closely with backend APIs for real-time data flows.
- Built and maintained **GitLab CI/CD** pipelines, including GitLab Runner configuration, to automate testing and deployment.

KASRA , Isfahan – Backend Developer | [Link](#)

MAR 2025 – JUN 2025 | 4 months

- Maintained and refactored legacy **.NET and SQL** Server backend modules, resolving critical production issues and improving system reliability.

- Developed and integrated new features into existing applications using .NET, SQL Server, and jQuery.

EDUCATION

B.Sc. in Computer Science – University of Isfahan

MONTH 2021 – present

- **Secretary of Association of Math and CS** | [link](#)
 - Coordinated 50+ volunteers to organize 40+ technical and community events.
 - Managed event logistics, sponsor communication, and cross-team coordination.
- **Teaching Assistant**
 - Data Structure (HEAD Teaching Assistant), Advanced programming, Basic programming, Introduction to Theory of Computation

Open Source Projects

API Gateway | [link](#)

- Designed a distributed routing system with a master service (**config authoring, draft/versioning, deployment orchestration**) and independent worker nodes handling live traffic routing.
- Implemented worker-side polling to fetch and apply config updates, building an in-memory routing table using **HTTPX** and **Starlette**.
- Built an admin panel for **observing worker status, active config versions, and routing statistics** in real time.

Whisper (E2EE Messenger) | [link](#)

- Built an **end-to-end encrypted** messaging app with **ECDH** key exchange and **AES-GCM** encryption in React/Vite frontend, containerized with Docker.
- Provisioned and deployed infrastructure using **Ansible** and **Vagrant**, configuring **nginx** as a reverse proxy, **fail2ban** for intrusion prevention, and **iptables** rules.

Auth Service | [link](#)

- Built a standalone authentication microservice using **FastAPI** and **SQLAlchemy**, issuing JWT tokens signed with **RS256** for **asymmetric verification**.
